Afternoon: Excursion to the Messel Pit

The Messel Pit fossil site was the first German natural monument admitted into UNESCO World Heritage List in 1995. It is the richest site in the world for understanding the living environment of the Eocene, a geologic period between 57 million and 36 million years ago. In particular, the Messel Pit provides unique information about the early stages of the evolution of mammals and includes exceptionally well-preserved mammal fossils, which range from fully articulated skeletons to the contents of stomachs of animals of this period.

We will meet at 2 pm in front of the lecture room (please bring your luggage). From there, we will be taken to the Messel Pit. At the Messel Pit, we will have a guided tour that will last about an hour. Afterwards, we will be transported to the train station and the airport. Our approximate arrival is scheduled at 4:30 pm
